Family Planning

We have a dedicated practice that provides comprehensive care in all aspects of fertility regulation. Patients with undesired or abnormal pregnancies can be referred to the Family Planning Practice. First trimester pregnancy terminations or miscarriage management occurs in the office with local anesthesia; second trimester terminations occur in the operating room.

Our practice provides all aspect of contraceptive management – from managing the fertility needs of women with complex medical problems to inserting intrauterine methods of contraception. Counseling and education is provided for patients as needed.

We will accommodate women in need of pregnancy termination within a few days for early pregnancy terminations, and within one week for second trimester procedures.
