

Certificate of Participation for Continuing Medical Education Seminars

The Office of Continuing Medical Education, Park Nicollet Institute, certifies that

Amy R. Cousins, MD

has participated in the educational activity titled

Achieving Glycemic Control: Self-Monitoring of Blood Glucose

via the September 2005, Vol. 1, Issue 2, Newsletter and is awarded 1.5 category 1 credit(s) toward the AMA Physician's Recognition Award

Objectives: Following this course, participants should be able to:

1. Describe the relationship between postprandial hyperglycemia and macrovascular complications in patients
2. Discuss the utility of SMBG in improving glycemic control and highlight emerging data in type 2 diabetes
3. Explain to patients why A1C measurement is necessary, but not sufficient for achieving glycemic goals
4. Demonstrate that SMBG is most effective when integrated into a comprehensive diabetes management program that educates patients on proper technique, instructs them on how to use their results, and teaches them what they may hope to achieve

OBJECTIVE 5: To evaluate the effectiveness and safety of preventing weight gain in obese patients by using an antidiabetic and appropriate diet/exercise techniques and the effects of weight loss on the risk factors (blood pressure and lipid profile) of cardiovascular diseases in comparison with other drugs. Study on obese patients, including a patient's family. The study will be conducted in the Department of Internal Medicine and Endocrinology and a patient who cannot change their diet and exercise habits will be excluded from the study.

For more information about the study, contact the study coordinator at 1-800-458-6232.

Therefore, $\Delta_{\text{H}}^{\text{rxn}} = \Delta_{\text{H}}^{\text{rxn}}(\text{solid}) - \Delta_{\text{H}}^{\text{rxn}}(\text{liquid})$ is the enthalpy of fusion of the solid phase.

Best regards,

and Medicaid. The 1996 Omnibus Appropriations Act, which took effect on October 1, 1995, included in this legislation a provision that would have required states to spend 15 percent of their Medicaid budgets on long-term care services.

“Sustaining the environment is the best way to ensure our own survival.”

(Table 2). The overall efficacy of fertility awareness-based methods of family planning, based on an interpretation of these 10 studies and the latest data (Table 3) from the UN (United Nations, 2003), suggests fairly accurate family planning for all methods, though there can be considerable heterogeneity of success with the method and an understanding of estimated failure rates for a variety of different forms of methods. To estimate a parameter appropriate to compare various methods of fertility awareness-based family planning, the 10 studies were used to calculate the mean failure rate for each method, the 10 studies were used to calculate the mean failure rate for each method.
