Experience

Clinical Fellow
Yale University
Jul 2019 – Present · 7 months
New Haven, CT
Department of Obstetrics, Gynecology & Reproductive Sciences
Division of Family Planning

Resident Physician
UI Health
Jun 2015 – Jun 2019 · 4 years 1 month
Greater Chicago Area
Department of Obstetrics & Gynecology

Hispanic Center of Excellence in Medicine Research Fellow
University of Illinois College of Medicine
Apr 2012 – Aug 2012 · 5 months
Greater Chicago Area
Assisted with protocol development for estimating cervical cancer and dysplasia prevalence using visual inspection with acetic acid in rural Senegal. The project is a collaboration between the Department of Family Medicine at the University of Illinois-Chicago, pre- and Senegal's National Ministry of Health.

Program Coordinator
Girls Incorporated of Greater Atlanta
May 2010 – Jul 2011 · 1 year 3 months
Greater Atlanta Area
Implemented research-based adolescent pregnancy prevention and health & hygiene curricula for Girls Incorporated's after school program and 2010 & 2011 summer camps. Facilitated same curricula in Atlanta area elementary and intermediate schools.

Graduate Research Assistant
Kaiser Permanente Center for Health Research
Oct 2010 – May 2011 · 8 months
Facilitated research activities by conducting literature reviews under the direction of multiple Kaiser research associates. Topics included maternal H1N1 influenza infection and pregnancy outcomes, environmental pollution and birth defects, and autism risk factors.

Intern
Feminist Women's Health Center
Jan 2010 – May 2010 · 5 months
Recruited participants into the Lifting Latina Voices Initiative, a program focused on addressing reproductive health disparities faced by Atlanta Latinas through extensive community outreach activities. Co-facilitated sexual and reproductive health education workshops in homes and at area universities. Assisted Program Coordinator with volunteer recruitment/training and development of educational materials. Clinic responsibilities included translating for Spanish-speaking patients.

Lab Assistant
Centers for Disease Control and Prevention
Sep 2009 – May 2010 · 9 months
Division of Viral and Rickettsial Diseases, Viral and Rickettsial Zoonoses Branch.

Performed and improved execution of PCR, DNA extraction, and gel electrophoresis in order to expand the scientific community's knowledge of Rickettsia rickettsii. Conducted literature reviews to obtain helpful information for future experimental designs and protocol enhancement. Maintained several tick colonies for co-transmission experiments.

Peer Advisor
University of Michigan
Aug 2007 – May 2009 · 1 year 10 months
Refined personal organizational and professional skills through planning and facilitating bi-weekly biomedical seminars for first-year undergraduate students. Seminar topics included research methodology, ethics, professional development, and cultural competency. Guided approximately 80 students seeking research projects in the biomedical field by providing resume, cover letter, and networking assistance. Supervised all aspects of grade reporting and student-faculty relationships.

Minority Health & Health Disparities International Research Training Fellow
El Instituto de Nutrición y Tecnología de los Alimentos (INTA) de la Universidad de Chile
Jan 2008 – Aug 2008 · 8 months

Advanced the scientific community's knowledge of the association between overweight and obesity

The identification of two subgroups of obese women with differing endometrial proliferation levels: potential consequences in the development of endometrial cancer
International Journal of Obesity - November 1, 2011

Enhanced endometrial proliferation correlates obesity to type-I (estrogen-dependent) endometrial cancer (EC). Our aim was to distinguish obese women (without EC) with differing endometrial proliferation.

Endometrial and blood samples were obtained from normal-weight and obese women without EC. Type-I EC samples were obtained from obese patients. On measuring endometrial proliferation (Ki67 and phosphorylated histone H3 (p-H3)), two groups of obese women without EC were identified: obeseHigh...

The effect of overweight and obesity on proliferation and activation of AKT and ERK in human endometria
Gynecologic Oncology - Apr 2010

Objective: To examine whether overweight and obesity could lead to increased endometrial proliferation and activation of AKT and ERK12 in cycling premenopausal women.

Methods: Endometrial and blood samples were obtained from women with normal endometrial histology, and allocated into three groups—normal-weight, overweight and obese—according to the subject's body mass index (BMI). Samples from obese patients with type-I endometrial cancer (EC) were included as a control. Cell...

Recommendations

A preview of what LinkedIn members have to say about Gabriela:

- I have had the pleasure of having Gabriela work for me as one of my Biomedical Peer Advisors in our department. As a UROP Peer Advisor, Gabriela served a critical role -- she was a liaison and program guide for approximately 40 first and second year students participating in our program. In this capacity, Gabriela advised UROP student researchers on the various aspects of conducting research in the biomedical sciences, conducted workshops on helping students develop lab and research skills, helped students find research projects, share information about academic and other campus resources, served as a liaison between student researchers and faculty mentors, and most importantly planned programs for and facilitated research seminars for the students. Our program was successful for our participants because Gabriela was part of our team! I would recommend her for any position, program without hesitation!
- Gabriela was a peer advisor to 30 students in the Undergraduate Research Opportunity Program. She mentored these students through the academic year, planned and facilitated research seminars for these students and provided individual peer mentoring. Gabriela was a PA for two years. Over these two years she mentored over 60 students. Through this experience she expanded her knowledge of University of Michigan resources, biomedical science research practice and principles, honed her communication and interviewing skills, and developed good problem solving skills. She was an effective collaborator and capable of working independently. She worked well with a very diverse group of students and UROP staff.
