

Located in Missoula, MT, since 1977, Blue Mountain Clinic has provided women with a comfortable, respectful

environment to access safe and legal abortion

At Blue Mountain Clinic, we trust in a person's decisions. With a staff of clinicians and counselors, we provide understanding and top-quality abortion care to people from all across the Northwest United States. We understand that every patient has individualized needs, and we strive to work with you to provide services that are right for you. Abortion services are no different- as each woman experiences abortion differently, a surgical or medical abortion may be more appropriate considering her circumstances, needs and comfort. We are able to offer all of the following options in our clinic, in Missoula, MT.

SURGICAL OR "IN CLINIC" ABORTION

- An outpatient, "in clinic" procedure that uses dilation and evacuation with aspiration. The doctor numbs the cervix, and gently opens it through dilation. Aspiration is then used to empty the uterus.
- While abortion is legal up to 22-24 weeks, at BMC we provide "in clinic" services for patients 5-16 weeks pregnant.
- We offer a mild sedative at patient's request. Please note: You will need to have a driver after the procedure if you are administered the sedative.
- Worried you are more than 16 weeks? The friendly staff at BMC can help direct you to services that can assist you.

What is an Abortion Procedure like?

- Every person experiences abortion differently- mentally, physically and spiritually.
- During the procedure, many people report to have experienced cramping similar to that of a heavy period – some report to have very little discomfort at all.
- After the procedure, patient dresses themselves and walk to an aftercare room where a nurse monitors the patient, answers any questions and gives instructions for self care in the coming weeks.
