gic preparation involves administration of either mifepristone, misoprostol, or
re procedure. Misoprostol is a prostaglandin E 1 analogue that induces uterine
nd is widely used alone for cervical preparation in late first and early second
tion as it decreases the risk of cervical injury [4] [5] [6][7]. Mifepristone is an
which causes cervical softening and increases sensitivity to prostaglandins
en extensively studied for its use in first trimester medical abortion, third
r induction, and more recently as an agent for cervical preparation in the
ter. ...

Conjunctive Agents for Cervical Preparation in Second Trimester Surgical Abortion

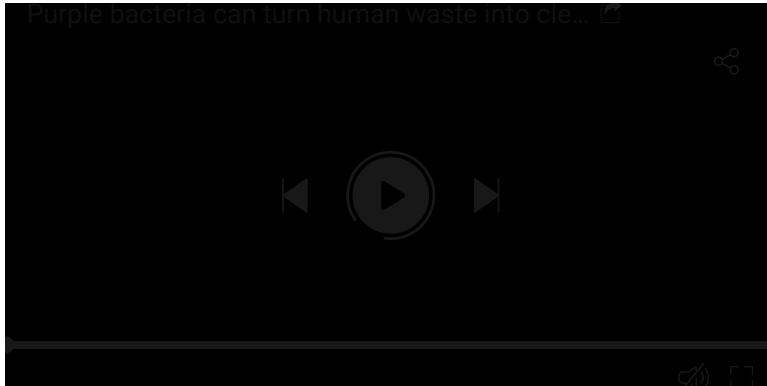

events associated with the use of misoprostol alone for cervical preparation to early second trimester surgical abortion (12-16 weeks)
