In addition to the medical history questionnaire you have been asked to complete, we would like you to take a moment to answer the questions below, if you are considering any method of birth control. This will enable us to make a more complete evaluation of your health and your suitability for a birth control method. During this time please feel free to elaborate on any health concerns you may have and discuss questions with your counselor.

**BIRTH CONTROL SCREENING**

Do you ever have:

- Swelling in legs, lungs, or elsewhere
- Chest pain, heart attack, or chest pain
- History of or suspected cancer of the breast or sex organs
- Liver disease
- Irregular or scanty periods before starting to take the pill
- Benign nodules, fibrocystic disease of the breast or abnormal mammogram
- High blood pressure
- High cholesterol
- Severe headaches
- Chronic Kidney disease
- Epilepsy / Seizures
- Major depression
- Uterine tumors of the uterus
- Diabetes disease
- Other abnormalities
- Bone disease or trait
- Do you smoke cigarettes, How many \_\_\_\_\_ For how many years \_\_\_\_\_
- Do you have a history of breast cancer in your family

CONSENT FORM FOR TERMINATION OF PREGNANCY,  
ANESTHESIA AND OTHER MEDICAL SERVICES

Jessica Scofield, hereby request, authorize and consent to the performance  
Name of Patient or Legal Representative  
of termination of pregnancy on Jessica Scofield to be performed under the direction of a  
Name of Patient  
Dr. Paul L. Sibley, M.D., licensed by the State of Florida.  
Name of Doctor

The nature, purpose and general details of the abortion procedure have been explained to me, and I have  
been advised of its inherent risks and hazards.  
I am aware of the alternative methods of treatment. However, because of my personal circumstances, I am  
going to undergo the termination of pregnancy (abortion).  
In the event that an unforeseen or unexplained situation arises with regard to my condition, I hereby author-  
ize and consent to the administration and performance of any additional medical or surgical treatment  
deemed necessary and reasonable by the above named doctor or his associate, under the circumstances for the  
best interests of my health, with the exception of:

NONE

(If no exception - state "None")

I consent to the administration of blood and/or blood substitutes and/or such medications, treatments and  
procedures as may be deemed advisable, in the judgment of the attending physician, in order to maintain the best  
interests of the patient in regard to her health and life.

I consent to the examination and disposal by the Center of all products of conception which may be removed  
in accordance with the procedures used for the termination of the pregnancy.

I am not suffering from no mental, emotional or physical disability which would affect my ability to make a knowl-  
edgeable, intelligent and rational decision to terminate my pregnancy.

I am not acting under any mental or physical form of coercion in making this decision, and do so voluntarily,  
in my free will and accord. I have not been coerced or otherwise influenced by any employee of this Center  
in making my decision to terminate my pregnancy.

I have no knowledge that no assurance or guarantee has been offered to me as to the results that may be obtained.  
I hereby acknowledge that I have read all of the above and that I fully understand the meaning of the  
statements made.

and your doctor are considering terminating your pregnancy. A common method of doing this is to dilate or widen the opening of the uterus or "womb" and remove the contents of the womb by suction. Complications from abortion are uncommon in the hands of trained medical personnel; however, complications do sometimes occur. Because of this fact your doctor can make no guarantee as to the result that might be obtained from this operation. *However, the complication rate for type of abortion is less than the complication rate for continuing the pregnancy.*

Any surgical procedure, bleeding and infection are potential complications of abortion procedure. These complications could cause prolonged illness, the need for blood transfusions, and permanent disability. Perforation or puncture of the wall of the uterus is a rare complication of abortion. This complication could cause pelvic bleeding and infection and even bleeding and infection in the legs, blood clots in the legs, pelvis, and lungs are other rare complications of abortion. Some of the complications of this operation can require further major surgery; some could potentially result in sterility or the permanent inability to become pregnant again; and very rarely, some of the complications can even be fatal.

Therefore, I understand that the decision to terminate my pregnancy is an emotional issue, as well as a legal one. I have been informed and understand that the termination of my pregnancy can result in a severe psychological reaction at a later date. I do not hold the Center, or any employee thereof, responsible for any psychological reaction resulting from the termination of pregnancy or other treatment offered by the Center, and hereby represent and warrant that they have done nothing to create, cause or otherwise cause such a reaction. I understand there has been a study that has indicated that having an abortion could increase the risk of breast cancer. The annual risk of breast cancer for a 40 year old woman might increase from 0.4 to 0.6 per 1,000 women. The alternative to abortion is to carry your pregnancy to continue; however, as mentioned, this too has the risk of complications. Although the complications listed are rare, it is necessary that you be made aware of them.

**TIFY:** I have read or have had read to me the contents of this form; I understand the risks and alternatives involved and have no further questions regarding the procedure.

Valium, Versed, Stadol, and Sublimaze are effective tranquilizers that have been used to reduce anxiety in patients in many circumstances. Intravenous administration gives an almost immediate calming effect without the pain associated with an intramuscular injection or the prolonged delay when given orally.

We recommend intravenous (I.V.) sedation to our patients for the tranquil effect it provides and to relieve the anxiety that women who undergo an abortion sometimes experience.

If you request I.V. sedation, there are certain conditions which must be met to insure your safety both during and after your abortion:

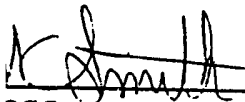

- 1) You must have a person available to drive you home from our center, and we urge you not to drive or operate any machinery for at least eight (8) hours after receiving I.V. sedation.
- 2) As with having an abortion, it is imperative that you have not taken any narcotics, barbiturates, tranquilizers or alcohol for at least twelve (12) hours prior. Also included in this list are illicit drugs such as cocaine, heroin or marijuana.
- 3) You should not have a known hypersensitivity or allergy to Valium, Versed, Stadol, or Sublimaze, and you should not have the medical condition known as glaucoma.

Although complications and side effects from I.V. sedation are rare, we would like to explain some possible adverse reactions to adequately inform you.

- 1) Drowsiness and fatigue are the most common side effects.
- 2) A reddened, tender area where the medication was given may occur. If it does, apply hot compresses and contact our center.
- 3) Bizarre, serious side effects which could even include cardiac arrest (death) must also be mentioned although these rare complications tend to be limited to the elderly and to very ill patients with lung disease.

When you receive I.V. sedation, it will be administered after the doctor has examined you and just prior to your abortion. We trust that it will make you less apprehensive and that the entire procedure will be less traumatic for you. The counselor will discuss I.V. sedation with you, and she will answer any questions you may have.

I consent to the administration of I.V. sedation and acknowledge that I have read all of the above and understand the effects and possible complications associated with I.V. sedation.

INFORMED CONSENT

HBV (HEPATITIS B VIRUS) HIV (HUMAN IMMUNODEFICIENCY VIRUS)

This form, when signed, will indicate authorization and consent to obtaining blood from me for the purpose of conducting an HIV and/or HBV test IN THE EVENT OF BLOOD OR FLUID EXPOSURE TO MEDICAL PERSONNEL INVOLVED IN MY CARE.

In the event that such exposure does occur, I understand that I will be notified and that such exposure will be documented in my medical record.

I understand that these tests are not 100% reliable and may, in some cases, indicate that a person has antibodies to the virus when the person does not (false positive) or fail to detect that a person has antibodies (false negative). I have also been informed that a positive blood test result does not mean that I have Hepatitis B or AIDS, and in order to be properly diagnosed other means must be used in conjunction with the blood test. I understand that a second or confirmatory test may be necessary before any test results are released and that I will be provided with an opportunity for one-to-one face counseling.

I understand that, if there is a positive test result, those health care providers who are directly responsible for my care and treatment will be notified of this result so that proper precautions may be observed.

I further understand that any information regarding my test results held by the health care facility, its employees or agents, any physicians, any laboratory or blood bank, any insurance company, health benefit plan, Medicaid, or other third party payor, the state or local department of health, or any other agency shall be strictly confidential and shall not be disclosed to any other agency or institution or made public, except where personal identifiers are removed from such information.

My signature below, I acknowledge that I have read this consent form and understand the provisions for release of information set forth in this consent.

DATE 9-30-97

I Jessica Scofield have been scheduled  
for an examination on 10/21 1997 following  
my abortion of 9-30-97

I understand the importance of this follow up evaluation and agree to return on the scheduled day.

I understand that it is my responsibility to see that I obtain this check up and if I cannot keep the original appointment to call the Center and reschedule.

I further understand that my failure to return for this examination and evaluation relieves the Center, it's physicians, employees and agents from responsibility for possible problems or consequences that could arise as a result of my failure to return to the Center.

CONDITION ON DISCHARGE stable

patient was evaluated in the Center on 9-30-97 and found to be 6/7 weeks pregnant. She requested an abortion. She was seen by a trained counselor where the procedure and other options were explained, birth control information was given and all questions were answered. During her counseling, a decisional lithotomy position and prepped and draped in the usual manner for suction D & C. A speculum was placed in the vagina. A paracervical block was then performed using xylocaine 1%. A curved single toothed tenaculum was then placed in the anterior lip of the cervix and the cervical os was dilated up through # 21 Pratt. A 1 ml. disposable plastic curette was then introduced through the internal os and the contents evacuated with suction. Following this the completion of the procedure was confirmed with a sharp curette following medications were given:

meperidine 500mg 1/2 @ 10:32, Ergometrine 0.2mg 1/2 @ 11:20  
 was given prescriptions for methergine gr. 1/320 per os q 6 doses and tetracycline 500 mg. q.i.d. for 5 days  
 patient was given a post-operative instruction sheet. She will return to the Center in 3 weeks for a post operative visit. 10/21 10/22
