Abstract

Background

This study was conducted to review cases of [second-trimester](#) postabortal hemorrhage (PAH) occurring at a private [women's health](#) facility that were treated with uterine artery [embolization](#) (UAE).

Methods

A retrospective review was conducted on all second-trimester terminations performed at a private women's health facility between 1999 and 2006. Cases of [PAH](#) treated with UAE were reviewed in detail, reviewing progress, operative and discharge notes along with [anesthesia records](#).
